

# Cloud Native Bangkok Roadmap

**JoJo** (Cloud Native Stylist @ Jumpbox)

**Organizer** 

### Who is CNCF?

Founded in 2015, the CNCF hosts critical components of the global technology infrastructure. CNCF brings together the world's top developers, end users, and vendors and runs the largest open source developer conferences.

#### **CNCF** is part of the Linux Foundation

The Linux Foundation is much more than Linux today

# Networking Networking

Cloud

We are helping global privacy and security through a program to encrypt the entire internet.

We are creating ecosystems around networking to improve agility in the evolving software-defined datacenter.

We are creating a portability layer for the cloud, driving de facto standards and developing the orchestration layer for all clouds.

We are creating the platform for infotainment in the auto industry that can be expanded into instrument clusters and telematics systems.

We are creating a permanent, secure distributed ledger that makes it easier to create cost-efficient, decentralized business networks.

Node.js and other projects are the application development framework for next generation web, mobile, serverless, and IoT applications.

We are regularly adding projects; for the most up-to-date listing of all projects visit tlfprojects.org

# Kubernetes<sub>1.0</sub>

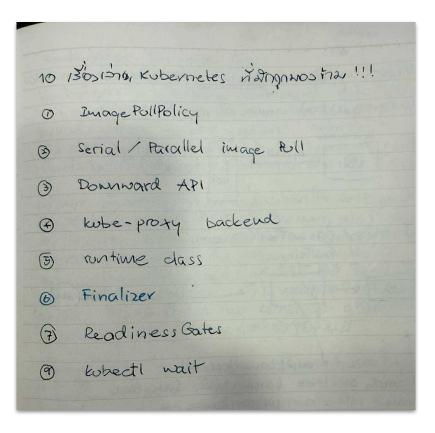

**Effective Nov 6, 2015** (foundation)

# **Background**

10 Bosina, Kubernetes Hangawostra !!!

- 1 Image PullPolicy
- 3 Serial / Parallel image Rull
- 3 Downward API
- @ kube-proty backend
- (3) runtime dass
- 6) Finalizer
- (7) Readiness Gates
- 9 kubectl wait

# **CNCF Project Maturities**

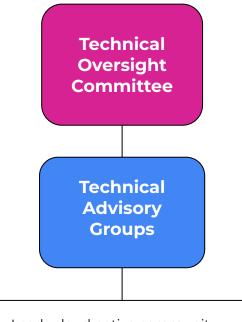

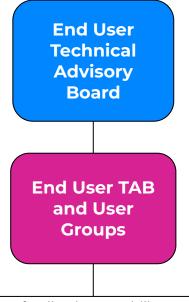

# **Our Structure**

- Responsible for marketing and strategic direction
- Budget decisions
- Works with TOC to set overall scope for CNCF

- Leads cloud native community
- Approves projects & defines architecture
- Maps user feedback to projects

- Gives feedback on usability, reliability & performance
- Shares insights on ecosystem gaps & priorities
- Boosts visibility of end user adoption

# **CNCF Ecosystem Support**

CNCF's mission is to make cloud native computing ubiquitous.

## **CNCF Cloud Native Definition**

Cloud native practices empower organizations to develop, build, and deploy workloads in computing environments (public, private, hybrid cloud) to meet their organizational needs at scale in a programmatic and repeatable manner. It is characterized by loosely coupled systems that interoperate in a manner that is secure, resilient, manageable, sustainable, and observable.

Cloud native technologies and architectures typically consist of some combination of containers, service meshes, multi-tenancy, microservices, immutable infrastructure, serverless, and declarative APIs — this list is non-exhaustive.

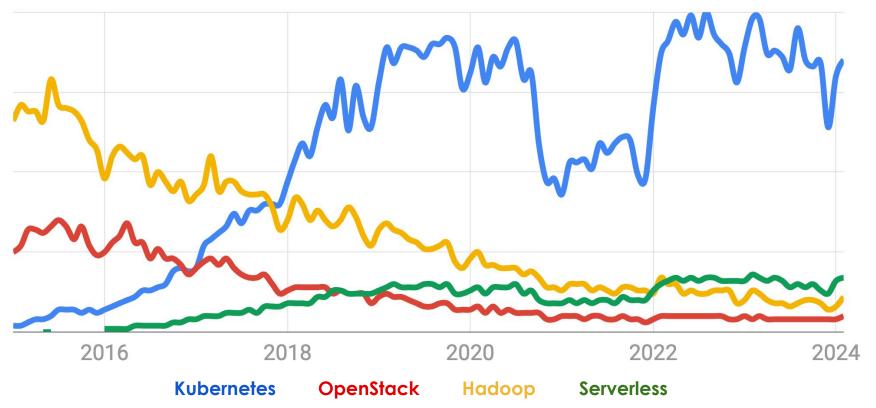

### Why Organizations Are Adopting Cloud Native

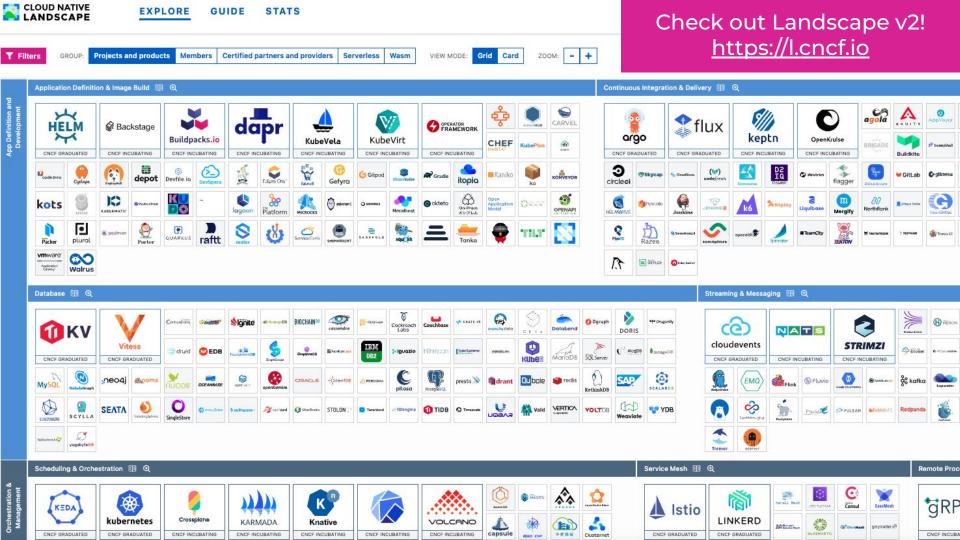

- Better resource efficiency lets you to run the same number of services on less servers
- 2. Improved resiliency and availability: despite failures of individual applications, machines, and even data centers
- Cloud native allows multi-cloud (switching between public clouds or running on multiple ones) and hybrid cloud (moving workloads between your data center and the public cloud)
- Cloud native infrastructure enables higher development velocity improving your services faster – with lower risk

#### **Kubernetes in Search Trends**

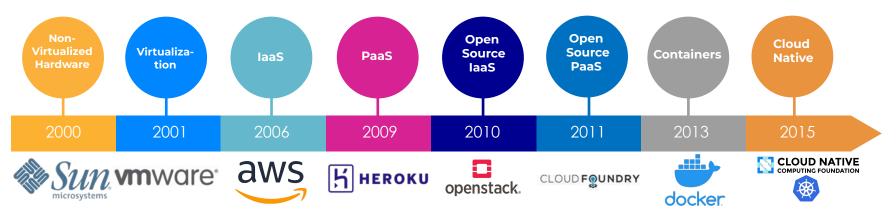

#### From Virtualization to Cloud Native

- Cloud native computing uses an open source software stack to:
- o segment applications into microservices,
- package each part into its own container
- and dynamically orchestrate those containers to optimize resource utilization

Welcome to CNCF
Ambassador

# Thank you for joining us
