The Developer Cognitive Overload Challenge

- Today's application teams are stretched thin
- Expected to build applications AND manage infrastructure
- 80% of developer cognitive load spent on infrastructure concerns
- Only 20% focused on actual business logic
- Result: Slower innovation, frustrated developers, technical debt

Platform as a Product

Design for Developer Experience + Build for Scale

Platform Engineering MATURITY MODEL

The maturity model is a tool to help organizations reflect on their current state of **Platform Engineering** adoption and quickly determine good opportunities to mature their **Practices** and further impact their **Business**.

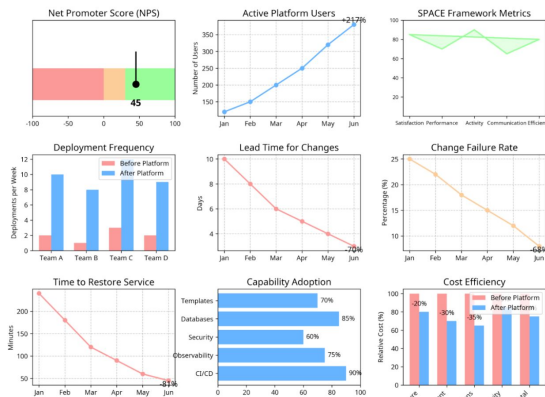

The model reduces the cognitive load involved in determining how to build

Successful Platforms and **Platform Teams**.
